

RG-126

**24 Volt Aircraft Battery for
Emergency Lighting & Back Up, Avionics,
and More**

TSO C-173 APPROVED

Concorde RG[®] Series emergency batteries protect and extend the life of other avionics and are charged directly from the DC bus with no dedicated charger. This results in a high inrush current which extends battery life with fast recovery time from discharge.

With the battery connected directly to the bus, transient spikes in the DC power are absorbed by the battery. Concorde Emergency Batteries are self regulating on charge and use only the current required to maintain them at full charge.

- Certified installation for Ni Cad replacement in several aircraft models
- RG[®] Series batteries are the original AGM battery designed for the U.S. Military
- RG[®] Series batteries - Valve Regulated Lead Acid (VRLA)
- Maintenance free - Constructed with non removable vent valves - no addition of electrolyte or water required
- Non spillable at any altitude or attitude
- Shipped fully charged and ready to install
- Ships Hazmat Exempt

Primary Aircraft Purpose: 24 Volt Emergency Power & Avionics Battery	Rated Capacity C1 23°C (74°F)	Maximum Weight
RG-126	3.5 AH	11.95 LB 5.4 KG

Rated in accordance with IEC Standard 60952-1

Specifications are subject to change without notice
