

# RG-132

24V Aircraft Battery  
Glass Panel Applications,  
Emergency, Back Up, & More

**TSO-C173 APPROVED**

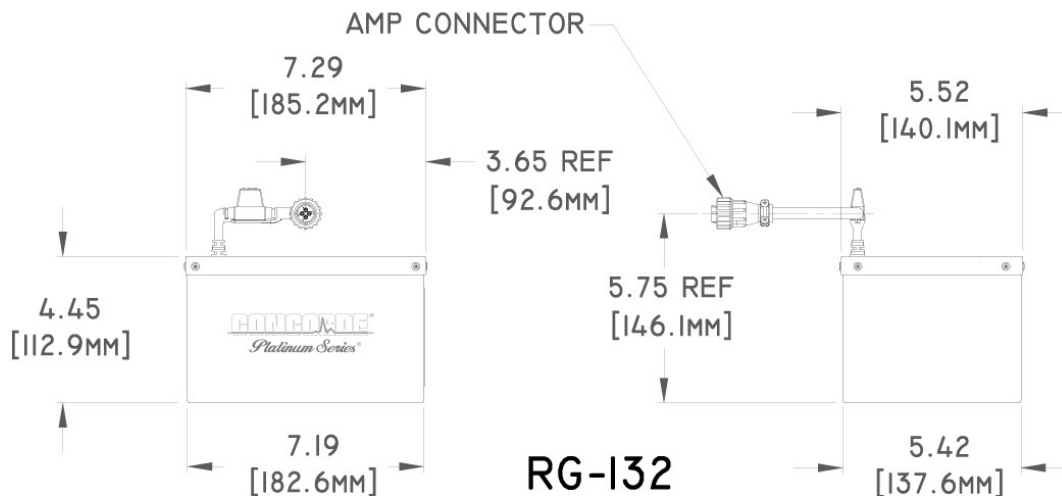

Concorde RG® Series emergency batteries protect and extend the life of other avionics and are charged directly from the DC bus with no dedicated charger. This results in a high inrush current which extends battery life with fast recovery time from discharge. With the battery connected directly to the bus, transient spikes in the DC power are absorbed by the battery. Concorde Emergency Batteries are self regulating on charge and use only the current required to maintain them at full charge.

## Recombinant Gas - The RG® Series are low resistance, valve regulated sealed lead acid (VRLA) batteries:

- Low impedance design for high power output and fast recharge
- Nonspillable & maintenance free – no addition of electrolyte or water ever required
- The original AGM (absorbent glass mat) battery designed for the US Military
- Improved aircraft readiness - shipped fully charged and ready to install
- RG® Series batteries ship Hazmat Exempt

### RG-132

- Maximum Weight 14.5 LB / 6.6 KG
- Rated Capacity C<sub>1</sub> 6.0 Ah
