

RG-135

24 Volt Aircraft Battery for Emergency Lighting, Back Up, Avionics

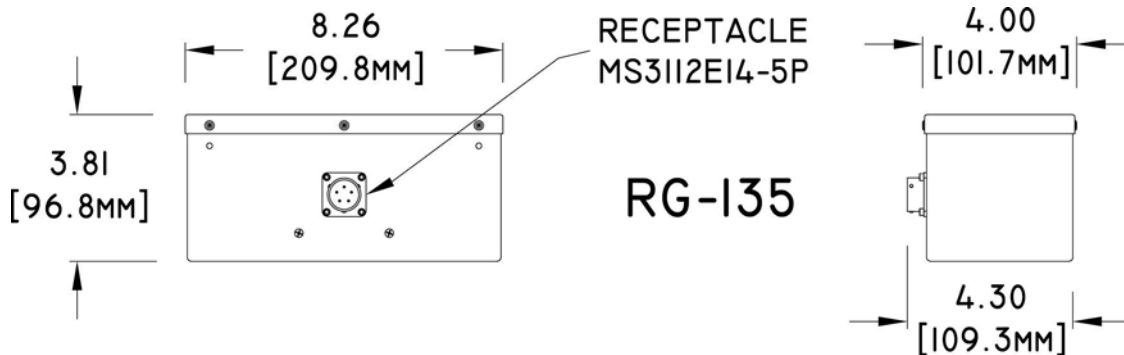

Concorde RG® Series emergency batteries protect and extend the life of other avionics and are charged directly from the DC bus with no dedicated charger. This results in a high inrush current which extends battery life with fast recovery time from discharge. With the battery connected directly to the bus, transient spikes in the DC power are absorbed by the battery. Concorde Emergency Batteries are self regulating on charge and use only the current required to maintain them at full charge.

Maintenance free Valve Regulated Lead Acid Absorbed Glass Mat (VRLA-AGM) cells requiring no replenishment of water or electrolyte. RG® Series batteries ship Hazmat Exempt over land, sea and air.

RG-135

- Rated Capacity C1 2.0 Ah
- Maximum Weight 6.83 LB / 3.1 KG
- Internal Charger 115 VAC, 400 HZ
